PUSHER, LLC

HOW TO BUY FROM US ♦ WHAT TO EXPECT WITH PUSHER HOLDS & VOLUMES

955 W. Folsom Ave., Salt Lake City, UT 84104 ♦ www.pusher.world

ABOUT PUSHER: Passionate climbers are the heartbeat of Pusher. Our brand exists to make climbers stronger. Our goal is to make holds that are fun to climb on for the climber and that last forever for the Gym owner. Our systems and people make dealing with us EASY for you. We serve the industry that serves climbers and we also provide a place for climbers to engage with other climbers.

IMPORTANT FEATURES AND BENEFITS OF PUSHER CLIMBING HOLDS

Our **SOLID** climbing holds -- Pusher's XXS to L solid climbing holds are very cost effective for climbing gyms with either small budgets or small footprints. When paired with volumes, your climbing customers can achieve similar movements experienced on the MACRO Reduced holds. Pusher's SOLID holds collection helps gyms to acquire more little holds more often to facilitate constantly fresh, new route experiences without breaking the bank.

Pusher **REDUCED** (hollow-back) holds -- Our M to XL Reduced holds are fun to climb on and purposefully designed to mimic actual outdoor climbing textures and shapes. Our reduced climbing holds are made with a heavier 10mm hold wall and rib thickness to ensure the highest safety conditions for your customers with a hold investment designed to last forever. Our holds might bend to powerful weight and impact pressure, but they'll never break.

The **MACRO Reduced** holds, made to the same long Life 10mm thickness as our smaller Reduced holds, are the closest thing to Volumes with the climbing experience of super large climbing holds (sized 2XL to 4XL). The combined texture, shape and size of these holds are amazing to climb on, allowing climbers to position their bodies in movements that truly mimic outdoor climbing conditions.

The intricate textures of Pusher holds are manufactured at Composite-X using their Dannomond® plastics, the best, most durable and longest lasting plastic on the planet. Composite-X's mold creation and manufacturing techniques reproduce the texture of Pusher designs and shapes at a superior quality unparalleled in the hold production industry. All of Pusher's Dannomond® climbing holds receive a final finish in a Composite-X autoclave, a pressure casting chamber that crushes bubbles entrained during the resin-molding process to ensure the elimination of any air bubble dimples from the finished product. All of the design and manufacturing processes that go into Pusher climbing holds are engineered to provide our customers with the highest quality climbing holds and the longest life cycle for our customers' investment.

Our goal is to make holds that will last you forever, because Pusher holds are cherished like heirlooms. Climbing hold plastic is not recyclable, and it is in the customer's best interest to purchase the ones that will last the longest.

PUSHER HOLDS MADE WITH DANNOMOND® POLYURETHANE

THE TRAINING EDGE OF PUSHER SHAPES WITH THE LONG LIFE OF DANNOMOND® PLASTICS

- SAFETY** Dannomond's high strength and impact resistance cause it to bend, NOT crack under extreme weight and impact conditions.
- SKIN FRIENDLY** Dannomond's soft, dry texture feels more comfortable and less slippery than other Polyurethane holds, allowing for longer training sessions and less discomfort.
- WEAR RESISTANCE** Dannomond® is a high performance pure Polyurethane, making it a very long lasting texture that does not wear like any other climbing hold material.
- BRIGHT COLORS** The Dannomond® formula contains a high level of UV stabilizer that gives excellent color stability for indoor climbing walls and reasonable outdoor stability.
